Absorption Rate: Months of Inventory in Austin 2012-2021

The **Absorption Rate**, also called “Months of Inventory,” is the best indicator of how fast or slow home values are moving up or down. The formula is the number of homes on the market divided by the number of homes sold in the prior month. With 6 to 9 months of inventory, the market is called **Balanced**, and home values remain stable with slight decreases or increases possible. Below 6 months is called a **Seller’s Market**, as home prices slightly increase due to demand.

Mortgage Rates - 20 Year Summary

We monitor interest rates because they directly affect buying power. The higher the rate, the more it costs for a buyer to buy. When interest rates rise, it has the same effect as a seller raising his price and fewer homes sell because mortgage payments are higher. Conversely, when rates decrease more buyers qualify to purchase and home sales usually increase. The chart below tracks mortgage rates for the past 20 years.
